R42942

Summary

In the wake of the explosion of the *Deepwater Horizon* offshore drilling rig in the Gulf of Mexico on April 20, 2010, federal agencies, state and local government agencies, and responsible parties faced an unprecedented challenge. An oil discharge continued for 87 days, resulting in the largest-ever oil spill in U.S. waters.

Led by the U.S. Coast Guard, response activities continue but have diminished substantially:

- At the height of operations (summer of 2010), response personnel numbered over 47,000; as of April 2014, that figure has dropped to 131 response personnel, including federal and state officials and responsible party staff and their contractors.
- In April 2014, Louisiana joined Alabama, Mississippi, and Florida by transitioning to a “Middle Response” cleanup process. However, the U.S. Coast Guard Federal On-Scene Coordinator stated that this “transition to the Middle Response process does not end clean-up operations.”

As one of the responsible parties, BP has spent over \$14 billion in cleanup operations. In addition, BP has paid over \$14 billion to the federal government, state and local governments, and private parties for economic claims and other expenses, including reimbursements for response costs related to the oil spill. BP and other responsible parties have agreed to civil and/or criminal settlements with the Department of Justice (DOJ). Settlements from various parties, to date, total almost \$6 billion. BP’s potential civil penalties under the Clean Water Act (CWA), which could be considerable, are not yet determined.

The natural resources damage assessment (NRDA) process, conducted by federal, state, and other trustees, is ongoing, and is now in its restoration planning phase. BP agreed to pay \$1 billion to support early restoration projects. Ten such projects have been funded to date, with aggregate estimated costs of approximately \$71 million. In December 2013, the trustees proposed an additional \$627 million to fund 44 restoration projects.

In addition, the RESTORE Act, enacted in 2012, directs 80% of any administrative and civil CWA penalty revenue into a newly created trust fund, which supports environmental and economic restoration projects in the Gulf states. Approximately \$800 million is expected to be available from a civil CWA settlement with Transocean—one of the responsible parties—but projects have yet to receive funding.

The *Deepwater Horizon* incident generated considerable interest in offshore drilling safety and related issues. In 2011, the Secretary of the Department of the Interior (DOI) redefined the responsibilities previously performed by the Minerals Management Service (MMS) and reassigned the functions of the offshore energy program among three separate organizations: the Bureau of Ocean Energy Management (BOEM), the Bureau of Safety and Environmental Enforcement (BSEE), and the Office of Natural Resources Revenue (ONRR). These agencies have promulgated several rulemaking changes, some of which are based on issues raised by the *Deepwater Horizon* spill.

In the aftermath of the spill, congressional interest was high, but has since decreased. Although the 111th and 112th Congresses enacted several oil spill-related bills, the provisions in these laws (other than the RESTORE Act) generally concerned short-term matters that did not have a lasting impact on oil spill governance.

---------------------------------	----

Introduction

In the wake of the explosion of the *Deepwater Horizon* offshore drilling rig on April 20, 2010, federal agencies, state and local government agencies, and responsible parties¹ faced an unprecedented challenge. Never before had a subsea drilling system discharge of this magnitude, or an oil spill of this size—estimated at approximately 206 million gallons (4.9 million barrels)—occurred in U.S. waters.²

The incident tested the public and private response capabilities, as well as the legal framework of liability and compensation under the Oil Pollution Act.³ The oil spill cleanup, natural resource damage assessment (NRDA), and compensation processes continue today.

This report provides a summary update of selected issues related to the 2010 *Deepwater Horizon* oil spill:

- Oil Spill Response
- Gulf Coast Restoration
- Economic Claims and Other Payments
- Civil and Criminal Settlements
- Safety Reforms
- Congressional Activity
- Investigations and Reports

More detailed analysis of these and other issues is addressed in other CRS products, some of which are listed at the end of this report.

¹ Although BP is discussed as if it is the sole responsible party—a key term in the existing liability and compensation framework—other entities are also considered responsible parties. The Department of Justice (DOJ) named nine defendants in a civil suit filed December 15, 2010 (press release at <http://www.justice.gov/opa/pr/2010/December/10-ag-1442.html>). For example, Transocean owned the *Deepwater Horizon* drilling rig. Three companies own the *Macondo* well: BP has a 65% share, Anadarko Petroleum Corporation has a 25% share, and MOEX Offshore has a 10% share (National Commission on the BP Deepwater Horizon Oil Spill and Offshore Drilling, *Deep Water: The Gulf Oil Disaster and the Future of Offshore Drilling*, Report to the President (hereinafter “Commission Report”), January 2011).

² An estimated 17% of this oil did not enter the Gulf environment, but was directly recovered from the wellhead by BP. See the Federal Interagency Solutions Group, Oil Budget Calculator Science and Engineering Team, *Oil Budget Calculator: Deepwater Horizon-Technical Documentation*, November 2010. See also CRS Report R41531, *Deepwater Horizon Oil Spill: The Fate of the Oil*, by Jonathan L. Ramseur.

³ P.L. 101-380, primarily codified at 33 U.S.C. §2701 et seq. The Oil Pollution Act amended other sections of the *U.S. Code*, including the Clean Water Act (e.g., 33 U.S.C. §1321) and portions of the tax code (26 U.S.C. §4611 and §9509). See CRS Report R41679, *Liability and Compensation Issues Raised by the 2010 Gulf Oil Spill*, by Jonathan L. Ramseur.

Oil Spill Response Activities

The uncontrolled discharge from the *Deepwater Horizon* continued for approximately 87 days until, following several attempts, responders gained control of the release on July 15, 2010. The response involved multiple agencies. As this spill occurred in the coastal zone, an on-scene coordinator (OSC) from the U.S. Coast Guard continues to direct and coordinate the on-site activities of federal, state, local, and private entities (e.g., BP and its contractors). This framework of multiple parties working together under the leadership of the federal government is referred to as the Unified Command.

During the height of operations in the summer of 2010,

- response personnel levels reached 47,000, and response vessel numbers approached 7,000;⁴ and
- the maximum extent of shoreline oiling involved almost 1,100 miles of shoreline.⁵

Response activities continue but have diminished substantially:

- As of April 2014, 131 response personnel remain in the Gulf region, including federal and state officials and responsible party staff and their contractors.⁶
- In June 2013, the Coast Guard announced that the shorelines of Alabama, Florida, and Mississippi returned to the pre-spill reporting system via the National Response Center;⁷
- In April 2014, the Coast Guard announced that Louisiana shoreline activities will transition to a “Middle Response” process, akin to the process in Alabama, Florida, and Mississippi.⁸ However, the Federal On-Scene Coordinator stated that “this response is not over—not by a long shot. The transition to the Middle Response process does not end clean-up operations.”⁹
- In November 2010, the federal government released a peer-reviewed publication that provided an estimate of what happened to the oil.¹⁰ The study concluded that

⁴ See “Operational Updates,” which were issued daily during the height of the oil spill response. Archived updates are available at <http://www.restorethegulf.gov>.

⁶ Personal communication with U.S. Coast Guard (April 23, 2014).

⁷ Unified Command Press Release, “U.S. Coast Guard Deepwater Horizon Response transitions to National Response Center reporting,” June 10, 2013, at <http://www.restorethegulf.gov>.

⁸ As described by the Federal On-Scene Coordinator, “while not an official response term under the NCP, the term ‘Middle Response’ has been used colloquially to describe the [National Response Center] process of responding to reports of oiling across the Gulf with (1) dedicated Coast Guard teams pre-positioned for rapid response to Deepwater Horizon oil and (2) pre-stationed Oil Spill Removal Organizations on standby, ready to clean up when required.” See Memorandum from Federal On-Scene Coordinator (Sparks) to Gulf Coast Incident Management Team, April 15, 2014, at <http://www.restorethegulf.gov/release/2014/04/15/fosc-update-deepwater-horizon-response>.

⁹ Press Release, “Different tactics, Deepwater Horizon Response is far from complete,” April 15, 2014, at <http://www.restorethegulf.gov/release/2014/04/15/different-tactics-deepwater-horizon-response-far-complete>.

¹⁰ The Federal Interagency Solutions Group, Oil Budget Calculator Science and Engineering Team, *Oil Budget* (continued...)

approximately 50% of the oil had evaporated, dissolved, or been effectively removed from the Gulf environment through human activities. Thus, at the time of the study, a substantial portion—over 100 million gallons—remained, in some form, in the Gulf.¹¹ Subsequent research suggests that microbial organisms (bacteria) consumed a considerable amount of the oil in the water column.¹²

Gulf Restoration: NRDA and the RESTORE Act

Natural Resource Damage Assessment

When a spill occurs, natural resource trustees conduct a natural resource damage assessment (NRDA) to determine the extent of the harm.¹³ Trustees may include officials from federal agencies designated by the President, state agencies designated by the relevant governor, and representatives from tribal and foreign governments. Natural resource damages are intended to be compensatory, not punitive. Collected damages cannot be placed into the general treasury revenues of the federal or state government, but must be used to restore or replace lost resources.

The National Oceanic and Atmospheric Administration (NOAA) oversees the NRDA process.¹⁴ The trustees' work occurs in three steps: a Pre-assessment Phase, the Restoration Planning Phase, and the Restoration Implementation Phase. The *Deepwater Horizon* NRDA process is in the restoration planning phase.

In 2011, BP agreed to provide \$1 billion toward early restoration projects in the Gulf of Mexico to address injuries to natural resources caused by the spill. "Early Restoration" projects may be developed prior to the completion of the injury assessment, which may take months or years to complete. According to NOAA, 10 early restoration projects have been funded to date with aggregate estimated costs of approximately \$71 million.¹⁵ In December 2013, the trustees released a draft plan that proposes \$627 million in funding for 44 additional restoration projects.¹⁶ The funding for the early restoration projects will be credited against BP's liability for natural resource damages resulting from the spill.

¹⁶ More details are available at NOAA's website at <http://www.gulfspillrestoration.noaa.gov/restoration/early-restoration/phase-iii/>.

Gulf Restoration and the RESTORE Act

In addition to natural resource damages that were a direct result of the spill, the *Deepwater Horizon* incident generated interest in natural resource issues in the region that were present before the spill occurred. On June 15, 2010, the Administration committed to developing a long-term Gulf of Mexico restoration plan for post-spill recovery needs as well as long-term restoration. In contrast to the environmental damages addressed by NRDA, the Administration's plan would address a broader array of restoration needs,¹⁷ many of which predate the oil spill.¹⁸ To further this objective, the President established the Gulf Coast Ecosystem Restoration Task Force in October 2010 to develop a restoration strategy,¹⁹ which was released in December 2011.²⁰ With the enactment of the RESTORE Act (discussed below) in July 2012, and the creation of the Gulf Coast Ecosystem Restoration Council, the President disbanded the Task Force.²¹

On July 6, 2012, the President signed P.L. 112-141 (MAP-21), which includes a subtitle referred to as the RESTORE Act. The RESTORE Act establishes the Gulf Coast Restoration Fund in the General Treasury. Eighty percent of any administrative and civil Clean Water Act (CWA) Section 311 penalties paid by responsible parties in connection with the 2010 *Deepwater Horizon* oil spill will provide the revenues for the Trust Fund. Amounts in the fund will be available for expenditure without further appropriation.

The RESTORE Act distributes monies to various entities through multiple processes:

- 35% divided equally among the five Gulf of Mexico states to be applied toward one or more of 11 designated activities;
- 30% provided to a newly created Gulf Coast Ecosystem Restoration Council to finance ecosystem restoration activities in the Gulf Coast region;
- 30% disbursed by the Council to the five Gulf states, based on specific criteria: shoreline impact, oiled shoreline distance from the *Deepwater Horizon* rig, and coastal population. Each state must submit a plan for approval, documenting how funding will support one or more of the 11 designated activities; and
- 5% to support marine research and related purposes.

As a result of a CWA civil settlement with Transocean—the owner of the *Deepwater Horizon* drilling rig and an identified responsible party—a total of \$800 million, plus interest, is expected to be deposited into the Trust Fund within the next two years. Potential CWA civil penalties against BP, which could be considerable, are yet to be determined. For more details, see the text box below. For more information on the RESTORE Act and its implementation, see CRS Report R43380, *Gulf Coast Restoration: RESTORE Act and Related Efforts*, by Charles V. Stern, Pervaze A. Sheikh, and Jonathan L. Ramseur.

¹⁸ See CRS Report R41640, *The Deepwater Horizon Oil Spill and the Gulf of Mexico Fishing Industry*, by Harold F. Upton.

¹⁹ Executive Order 13554 in *75 Federal Register* 62313 (October 8, 2010).

²⁰ See http://epa.gov/gulfcoasttaskforce/pdfs/GulfCoastReport_Full_12-04_508-1.pdf.

²¹ Executive Order 13626 in *77 Federal Register* 56749 (September 13, 2012).

Potential Clean Water Penalties against BP

Section 311 of the Clean Water Act authorizes certain civil judicial penalties for the owner, operator, or person in charge of a vessel, onshore facility, or offshore facility for violations of that provision. A civil judicial penalty applies to a violation of the CWA prohibition on discharging oil into navigable waters of the United States. The monetary penalty for this violation may be up to \$37,500 per day of violation, or up to \$1,100 per barrel discharged. If the violation is deemed a result of gross negligence or willful misconduct, the penalty is not less than \$140,000 for the violation, nor more than \$4,300 per barrel discharged.

According to the most recent estimate from the federal government, the 2010 oil spill resulted in a discharge of approximately 206 million gallons (4.9 million barrels) in the Gulf of Mexico.²² However, BP argued that an estimated 17% of the 4.9 million barrels did not enter the Gulf environment, but was directly recovered from the wellhead by BP. In February 2013, the federal government agreed with BP that this volume of oil would not be considered toward the CWA penalty determination.²³ Accordingly, the estimated amount of oil discharged that is relevant for determining CWA penalties is approximately 4.1 million barrels.

Based on the February 2013 agreement, some have estimated the potential judicial penalty range to be between \$4.5 billion and \$17.6 billion. The range reflects the difference resulting from multiplying the estimated 4.1 million barrels by either \$1,100 or \$4,300/barrel discharged, depending on whether or not the discharged is deemed to be the result of “gross negligence” or “willful misconduct.”

However, when determining the amount of the judicial penalty, CWA Section 311(b)(8)²⁴ states that “the Environmental Protection Agency (EPA) Administrator, the Secretary [of Homeland Security],²⁵ or the court, as the case may be,” must consider other factors, including “the degree of culpability involved” and “the nature, extent, and degree of success of any efforts of the violator to minimize or mitigate the effects of the discharge.” Therefore, the judicial civil penalty for the incident could be less than the low end of the above range (\$4.5 billion), even if gross negligence or willful misconduct is determined.

Economic Claims and Other Payments

As an identified responsible party,²⁶ BP is liable for cleanup costs, natural resource damages (discussed in a subsequent section), and various economic damages.²⁷ The total payments associated with the 2010 Gulf spill have already surpassed those of the 1989 *Exxon Valdez* oil spill.²⁸

²² Federal Interagency Solutions Group, Oil Budget Calculator Science and Engineering Team, *Oil Budget Calculator: Deepwater Horizon-Technical Documentation*, November 2010. See also CRS Report R41531, *Deepwater Horizon Oil Spill: The Fate of the Oil*, by Jonathan L. Ramseur.

²⁴ 33 U.S.C. §1321(b)(8).

²⁵ The Coast Guard is part of the Department of Homeland Security.

²⁶ For the purpose of this report, BP is discussed as if it is the sole responsible party—a key term in the existing liability and compensation framework. However, other parties are also considered responsible parties. The Department of Justice named 9 defendants in a civil suit filed December 15, 2010. See Press Release at <http://www.justice.gov/opa/pr/2010/December/10-ag-1442.html>.

²⁷ Oil Pollution Act, 33 U.S.C. §2702.

²⁸ The *Exxon Valdez* was a U.S.-flagged tanker that grounded in Prince William Sound, AK, in March 1989, spilling approximately 11 million gallons of oil. The oil spill sparked regional and nationwide interest in oil spill prevention, response, clean-up, and liability. In association with the 1989 oil spill, Exxon paid approximately \$4.9 billion. Payments were made voluntarily and pursuant to several different legal proceedings at different times over approximately 20 years.

As of December 2013, BP has spent over \$14 billion in cleanup operations.²⁹ Further payments made by BP to different parties for various purposes are identified in **Table 1**.

As noted in the table, several of the payment mechanisms are still ongoing, namely the “Court Settlement Program.” In August 2010, multiple lawsuits, involving over 100,000 private claims against BP and the other defendants (e.g., Transocean and Haliburton) were consolidated before the U.S. District Court in New Orleans. On April 18, 2012, BP and many of the plaintiffs reached a settlement agreement, which was approved by the Court on December 21, 2012. The settlement establishes a court-supervised program to evaluate and award various economic claims from individuals and businesses, but does not involve governments, shareholders, or claims related to the drilling moratorium. Except for a limit of \$2.3 billion for seafood compensation, the settlement is not capped.³⁰ As indicated in **Table 1**, the settlement program had awarded nearly \$4 billion as of March 31, 2014.

However, BP has pursued legal action to suspend payments from the settlement program, arguing that parties are receiving payment for losses “not traceable to the Deepwater Horizon accident and oil spill.”³¹ In the latest decision (March 3, 2014), the 5th Circuit Court of Appeals upheld a federal district ruling, allowing the court-supervised program to continue paying claims.³²

Another ongoing compensation process, identified as the “BP Claims Program” in **Table 1**, refers to claims to eligible parties not subject to the class action settlement or for those who choose to opt out of the class settlement.

Other components of the consolidated litigation are still pending, such as claims against BP not included in the above settlement and claims involving the other defendants, including Transocean and Haliburton.

Table I. Selected BP Payments and Commitments Related to the 2010 Oil Spill

As of March 31, 2014, Unless Noted Otherwise

Recipient(s)	Purpose	Amount of Payment (\$ millions)
Federal government	Reimbursements for oil spill response costs ^a	\$705
	Behavioral health	\$10
	Contributions ^b	\$22
States	Reimbursements for response costs and other claims	\$738
	Tourism promotion	\$179
	Seafood marketing	\$49
	Seafood testing	\$25
	Behavioral health	\$42
	Contributions	\$5
	Individuals and/or businesses	Economic claims
	- BP Claims Program May 5, 2010 - August 22, 2010	\$399
	- Gulf Coast Claims Facility August 23, 2010 – June 4, 2012	\$6,667
	- Court Settlement Program June 4, 2012 – Present	\$3,996 <i>Ongoing</i>
	- BP Claims Program June 4, 2012 – Present	\$11 <i>Ongoing</i>
	Vessels of Opportunity Program ^c	\$626
	Real Estate Fund ^d	\$54
	Gulf of Mexico Research Initiative ^e	\$500
TOTAL		\$14,028

Source: Prepared by CRS; unless specified below, data from BP, Gulf of Mexico Oil Spill Claims and Other Payments Public Report, March 31, 2014, at <http://www.bp.com>.

Notes: More information about the above payments is available at <http://www.bpgulfupdate.com>.

- a. The reimbursed response costs to federal and state governments is likely included in BP's estimate of total response costs (over \$14 billion).
- b. The purpose of the "contributions" to the federal government and states is not specified in BP's 2014 Public Report.
- c. During the oil spill response, BP employed private vessels to conduct response efforts such as skimming, booming, and transporting supplies. According to the final report from National Commission on the BP Deepwater Horizon Oil Spill and Offshore Drilling, vessels made between \$1,200 and \$3,000 per day. Payment data from Gulf Coast Claims Facility, Overall Program Statistics, May 14, 2012.
- d. BP established a separate fund and process to award claims to real estate agents affected by the incident. Claims data from Gulf Coast Claims Facility, Overall Program Statistics, May 14, 2012.
- e. On May 24, 2010, BP announced a commitment of up to \$500 million over 10 years to fund an independent research program to study the impact of the oil spill and its associated response on the environment and public health in the Gulf of Mexico. More information is available at <http://gulfresearchinitiative.org>.

Civil and Criminal Settlements

The Department of Justice (DOJ) has announced criminal and/or civil settlements with several parties involved in the 2010 oil spill.³³ Settlements from various parties, to date, total almost \$6 billion. Other settlements may be forthcoming. As discussed below, the settlement payments will support several objectives.

BP Criminal Settlement

On November 15, 2012, BP and DOJ announced a criminal penalty settlement of approximately \$4 billion, which was approved by the U.S. District Court in the Eastern District of Louisiana on January 29, 2013. In accordance with the settlement, BP has agreed to plead guilty to 11 felony counts of Misconduct or Neglect of Ships Officers for the deaths of 11 people in the disaster, as well as misdemeanor counts under the Clean Water Act and the Migratory Bird Treaty Act, and a felony count of obstruction of Congress.³⁴

The \$4 billion would be distributed as follows:

- \$2.394 billion to the National Fish and Wildlife Foundation (NFWF) to support restoration efforts in the Gulf states.³⁵
- \$1.15 billion to the Oil Spill Liability Trust Fund.
- \$350 million to the National Academy of Sciences for oil spill prevention and response research.
- \$100 million to the North American Wetlands Conservation Fund.
- \$6 million to the General Treasury.

BP Civil SEC Settlement

On November 15, 2012, BP and the Securities and Exchange Commission (SEC) announced a settlement involving civil securities fraud charges, including statements concerning the estimated flow rate of the leaking well. The U.S. District Court in the Eastern District of Louisiana approved the settlement on December 10, 2012. The BP agreed to pay \$525 million to settle the charges. The SEC stated it would use this payment to establish a fund “to provide harmed investors with compensation for losses they sustained in the fraud.”³⁶

³³ DOJ also filed charges against individuals for various actions.

³⁴ See <http://www.justice.gov/iso/opa/resources/43320121115143613990027.pdf>.

³⁵ For more information on this distribution, see CRS Report R43380, *Gulf Coast Restoration: RESTORE Act and Related Efforts*, by Charles V. Stern, Pervaze A. Sheikh, and Jonathan L. Ramseur.

³⁶ See SEC Press Release, November 15, 2012, at <http://www.sec.gov/news/press/2012/2012-231.htm>.

EPA's Suspension of BP

On November 28, 2012, EPA announced suspension of BP Exploration and Production Inc. (and a number of affiliated companies) from certain future government contracting activities, including government procurement contracts.³⁷ As grounds for this suspension, EPA cited BP's lack of business integrity, particularly information that reportedly came to light during settlement discussions with DOJ (discussed above).³⁸

EPA's action raised questions concerning BP's ability to participate in offshore lease sales for oil and gas production. BP did not participate in a November 28, 2012, lease sale administered by DOI, leaving many to question whether EPA's action barred BP from bidding, or whether BP decided to sit it out.

On March 13, 2014, EPA reached a conditional agreement with BP to lift the suspension and debarment.³⁹

Transocean Civil and Criminal Settlement

On January 3, 2013, the Department of Justice announced civil and criminal penalty settlements with Transocean, the company that owned and operated the *Deepwater Horizon* drilling rig. The U.S. District Court in the Eastern District of Louisiana approved the settlements on separate occasions in February 2013.

In the civil settlement, Transocean agreed to pay \$1 billion, of which 80% (\$800 million) will go into the newly created Gulf Coast Restoration Trust Fund (pursuant to the "RESTORE Act" in P.L. 112-141). The remaining 20% goes into the Oil Spill Liability Trust Fund.⁴⁰

In the Transocean Guilty Plea agreement for criminal charges, Transocean agreed to pay \$400 million.⁴¹ The amount is to be distributed as follows:

- \$150 million to the NFWF;
- \$150 million to the National Academy of Sciences for oil spill prevention and response research; and
- \$100 million in fines would go to the Oil Spill Liability Trust Fund.⁴²

MOEX Civil Settlement

On February 17, 2012, DOJ and MOEX Offshore 2007 LLC agreed to a \$70 million civil penalty settlement, with an additional \$20 million in supplemental environmental projects. The U.S. District Court in the Eastern District of Louisiana approved the settlement on June 8, 2012. At the

³⁷ For more information on this issue, see CRS Report RL34753, *Debarment and Suspension of Government Contractors: A Legal Overview*, by Kate M. Manuel.

³⁸ The full announcement of this suspension can be found at <http://yosemite.epa.gov/opa/admpress.nsf/d0cf6618525a9efb85257359003fb69d/2aaf1c1dc80c969885257abf006dafb0!opendocument>.

³⁹ See <http://www2.epa.gov/home/march-13-2014-administrative-agreement-lifting-suspension-and-debarment-bp-federal-government>.

⁴⁰ The civil settlement consent decree is available at <http://www.justice.gov/iso/opa/resources/915201313122945254063.pdf>.

⁴¹ The Guilty Plea Agreement is available at <http://www.justice.gov/opa/documents/transocean-plea-agreement.pdf>.

⁴² Although the agreement does not explicitly state this allocation, penalties paid pursuant to Clean Water Act Section 309 (33 U.S.C. §1319) would go to the Fund (26 U.S.C. §9509(b)(8)).

time of the 2010 oil spill, MOEX owned approximately 10% of the lease for the *Macondo* well. Of the penalty amount,

- \$45 million goes to the Oil Spill Liability Trust Fund, and
- \$25 million is to be distributed in various amounts among the five Gulf states.⁴³

DOI Safety Reforms and Regulatory Developments

Agencies within the Department of the Interior (DOI) have the lead regulatory authority for offshore oil and gas development activities, including operational safety and environmental considerations.⁴⁴ The 2010 *Deepwater Horizon* oil spill generated considerable interest in offshore drilling safety and related issues. For example, in its 2011 final report, the National Commission on the BP Deepwater Horizon Oil Spill and Offshore Drilling stated, “changes in safety and environmental practices, safety training, drilling technology, containment and clean-up technology, preparedness, corporate culture, and management behavior will be required if deepwater energy operations are to be pursued in the Gulf—or elsewhere.”⁴⁵

This section highlights Department of the Interior (DOI) regulatory developments and other activities that have addressed some of the safety concerns and other issues raised during and after the 2010 oil spill.

DOI Structural Changes

Prior to the oil spill, DOI and congressional investigations had identified a number of management shortcomings, ethical lapses among personnel, and conflicts of interest in the former Minerals Management Service (MMS). Specific concerns involving agency reorganization and regulatory policies toward safety reforms had been raised in oversight hearings and in reports, including reports by the DOI inspector general.⁴⁶

On May 19, 2010, Secretary of the Interior Ken Salazar replaced the MMS with the Bureau of Ocean Energy Management, Regulation and Enforcement (BOEMRE). On October 1, 2011, DOI divided BOEMRE into three separate entities: the Bureau of Ocean Energy Management (BOEM), the Bureau of Safety and Environmental Enforcement (BSEE), and the Office of Natural Resources Revenue (ONRR).⁴⁷

⁴³ For further information, see EPA’s website, which includes the Consent Decree, at <http://www.epa.gov/enforcement/air/cases/moex.html>.

⁴⁷ For more information see CRS Report R42599, *Department of the Interior (DOI) Reorganization of Ocean Energy Programs*, by Curry L. Hagerty.

DOI Regulatory Developments

DOI agencies have issued several regulatory and policy changes related to offshore activities. In general, these efforts are intended to reduce accidents, injuries, and spills during offshore drilling activities. The regulations add several new requirements to regulations for Safety and Environmental Management Systems (SEMS). Some requirements pertain to developing and implementing stop work authority and establishing guidelines for reporting unsafe working conditions. Additional requirements include conducting job safety analyses for activities identified in an operator's SEMS program. In addition, there are requirements that SEMS programs be audited by an accredited audit service provider.

The following is a time line of relevant regulatory actions:

- October 14, 2010: interim final rule⁴⁸ implementing certain safety measures that were identified in a June 2010 report from the Secretary of the Interior.⁴⁹
- October 15, 2010: final rule requiring OCS operators to implement a SEMS program.⁵⁰
- August 22, 2012: final rule amending and clarifying several safety provisions in the October 14, 2010 interim final rule.⁵¹
- April 5, 2013: final rule adding new requirements to the existing SEMS regulations.⁵²
- February 24, 2014: proposed rule that would increase the Oil Pollution Act liability limit⁵³ for damages applicable to offshore facilities from \$75 million to approximately \$134 million.⁵⁴

In addition to rulemaking activity, DOI agencies issued several notices to lessees to address related issues through policy guidance.⁵⁵

Other DOI Actions

On August 16, 2013, DOI's Bureau of Safety and Environmental Enforcement (BSEE) and the Department of Transportation's Bureau of Transportation Statistics (BTS) signed an interagency agreement to develop a confidential near-miss reporting system. This system would expand the ability of BSEE and industry to collect certain information about accident precursors and

⁴⁸ 75 *Federal Register* 63345 (October 14, 2010).

⁴⁹ On June 8, 2010, BOEMRE issued a Notice to Lessees (NTL) addressing those recommendations identified in the Safety Measures Report as warranting immediate implementation (NTL No. 2010-N05—Increased Safety Measures for Energy Development on the OCS).

⁵⁰ This rule (75 *Federal Register* 63609) was first considered in an advanced notice of proposed rulemaking in 2006.

⁵¹ 77 *Federal Register* 50856 (August 22, 2012).

⁵² 78 *Federal Register* 20423 (April 5, 2013).

⁵³ 33 U.S.C. §2704(a)(3). The liability limit for offshore facilities only applies to natural resource damages and eligible economic damages. In contrast to other responsible party categories (e.g., tank vessels and onshore facilities) the liability for response costs is unlimited.

⁵⁴ 79 *Federal Register* 10056 (February 24, 2014).

⁵⁵ The NTLs are available at <http://www.bsee.gov/About-BSEE/BSEE-History/Reforms/Reforms/>.

potential hazards associated with OCS operations in particular locations. The system involves voluntary reporting by both industry and federal personnel, to ensure confidentiality for those who report near misses. The BTS is responsible for developing and managing the reporting system, which is expected to be operational in 2014.

On August 22, 2013, BSEE and the Department of Energy signed a Memorandum of Collaboration to coordinate the ongoing efforts of the two agencies on offshore research and technological improvement projects. The agencies plan to continue to collaborate in support of three primary objectives: building safety through technological improvements; supporting research and development for offshore operations; and working together to support the implementation of recommendations arising from various investigations and studies related to the *Deepwater Horizon* oil spill.⁵⁶

Congressional Activity

Activity in the 111th Congress⁵⁷

During the immediate aftermath of the oil spill, Senate and House committees in the 111th Congress held more than 60 hearings on a variety of oil spill-related issues.⁵⁸ Members introduced more than 150 legislative proposals related to oil spill matters. The 111th Congress enacted three of these proposals into law (P.L. 111-191, P.L. 111-212, and P.L. 111-281). Provisions in the first two laws generally concerned short-term matters that will not have a lasting impact on oil spill governance. However, H.R. 3619, the Coast Guard Authorization Act for Fiscal Years 2010 and 2011, which the President signed October 15, 2010 (P.L. 111-281), included more substantial changes.

In addition to the enacted legislation, the House in the 111th Congress passed several bills, including H.R. 3534 (the Consolidated Land, Energy, and Aquatic Resources Act, or CLEAR Act), that included multiple oil spill provisions. The Senate had comparable bills on its legislative calendar under General Orders, but did not vote on their passage.

Activity in the 112th Congress⁵⁹

Although interest arguably diminished in the 112th Congress (relative to interest in the 111th Congress—see below), some Members continued to express concerns regarding various oil spill-related policy matters. Members proposed over 50 bills that contained oil spill-related provisions.

⁵⁶ More information is available at <http://www.bsee.gov/BSEE-Newsroom/Press-Releases/2013/Press08232013z.aspx>.

⁵⁷ For further details see, CRS Report R41453, *Oil Spill Legislation in the 111th Congress*, by Jonathan L. Ramseur (archived).

⁵⁸ In some cases, investigatory reports followed. For example, see reports by the House Committee on Energy and Commerce Oversight and Investigations Subcommittee and Energy and the Environment Subcommittee, at <http://democrats.energycommerce.house.gov/>; and the House Committee on Natural Resources, at <http://naturalresources.house.gov/calendar/archives/list.aspx?EventTypeID=158:165>.

⁵⁹ For more details, see CRS Report R41684, *Enacted and Proposed Oil Spill Legislation in the 112th Congress*, by Jonathan L. Ramseur.

The 112th Congress enacted two statutes that contain oil spill-related provisions. The RESTORE Act, enacted on July 6, 2012, is discussed above. On January 3, 2012, the President signed P.L. 112-90 (the Pipeline Safety, Regulatory Certainty, and Job Creation Act of 2011), which

- increases civil penalties for violating safety requirements and requires automatic and remote-controlled shutoff valves on newly constructed transmission pipelines;
- directs the Department of Transportation to analyze leak detection systems, and after a review by Congress, issue requirements based on this analysis; and
- requires the Pipeline and Hazardous Materials Safety Administration to review whether current regulations are sufficient to regulate pipelines transmitting “diluted bitumen,” and analyze whether such oil presents an increased risk of release.

On December 23, 2011, the 112th Congress enacted one bill with provisions that affect OCS development: P.L. 112-74 (Consolidated Appropriations Act, 2012). Among other provisions, this act transferred air emission regulatory authority in the OCS off Alaska’s north coast from the U.S. Environmental Protection Agency (EPA) to the Department of the Interior (DOI). Some stakeholders would contend that DOI’s program has less stringent requirements than EPA’s program.⁶⁰

In addition, the House passed several bills that intended to encourage oil and gas development on the OCS: H.R. 1230, H.R. 1229, H.R. 1231, and H.R. 2021. The Senate did not report analogous legislation.

Activity in the 113th Congress

Compared to prior Congresses, oil spill-related legislation has received minimal attention in the 113th Congress. Members have proposed approximately 15 bills that include oil spill-related provisions. To date, one such bill has passed the House. On June 28, 2013, the House passed the Offshore Energy and Jobs Act (H.R. 2231), which would accelerate domestic oil and gas production by providing for, among other statutory changes, a reorganization of the current DOI subdivisions responsible for domestic oil and gas operations.⁶¹

Investigations and Reports

Several investigations and commissions—both federal and private—were initiated to examine issues surrounding the *Deepwater Horizon* incident. The following includes a list of the more prominent studies, investigations, and inquiries that have been completed or are under way (listed in order of report publication date):

⁶⁰ For more information, see CRS Report R42123, *Controlling Air Emissions from Outer Continental Shelf Sources: A Comparison of Two Programs—EPA and DOI*, by Jonathan L. Ramseur.

Additionally, the U.S. Government Accountability Office (GAO) began to examine DOI performance in the aftermath of the *Deepwater Horizon* events.⁷³ Specifically, GAO listed DOI offshore energy programs as part of its “High Risk” series for the first time in 2011, based on the rationale that the combination of regulatory changes in the aftermath of the *Deepwater Horizon* events warranted a close study of DOI agency performance in five areas: (1) reorganization, (2) balancing responsibilities, (3) human capital, (4) revenue collection, and (5) development of existing leases.⁷⁴ GAO updated this report in 2013.⁷⁵ The 2013 report announced GAO plans to continue studying how all three DOI agencies (ONRR, BOEM, and BSEE) are performing by, among other measures, “focusing on the causes of human capital challenges, actions taken, and how DOI plans to measure the effectiveness of corrective actions.”⁷⁶ GAO is expected to update this report in 2015 at the start of the 114th Congress.⁷⁷
